BACKEND SOFTWARE ENGINEER | FINTECH & PAYMENTS

Jesús David Juvinao Pérez

Node.js · TypeScript · Go · NestJS · APIs · Hexagonal Architecture · AWS · Payments

Bogotá, Colombia | +57 301 454 8087 | juvinaojesusd@gmail.com | linkedin.com/in/jesus-david-juvinao-perez-8a9352174 | github.com/Jesus123780 | juvinaodev.netlify.app

PROFESSIONAL SUMMARY

Backend-focused Software Engineer with experience building and evolving APIs, backend services and scalable platforms. Experienced with Node.js, TypeScript, Go (Golang) and the JavaScript ecosystem, contributing to fintech, digital payments and financial services solutions. Skilled in REST and GraphQL API integration, microservices, Clean and Hexagonal Architecture, SOLID principles, data persistence and service-to-service communication. I complement backend development with cloud infrastructure and application operations using AWS, Docker, CI/CD, monitoring and diagnostic tools. I focus on building secure, maintainable and resilient services, understanding business workflows and collaborating with Engineering, Product and DevOps teams to deliver production-ready solutions.

TECHNICAL SKILLS

Backend & Languages: Node.js, TypeScript, Go (Golang), JavaScript (ES6+), NestJS, Express.js, Apollo Server, Ruby on Rails

APIs & Service Integration: REST APIs, GraphQL, Apollo, SOAP, WebSockets, Subscriptions, third-party integrations, API contracts and consumption

Architecture & Software Design: Hexagonal Architecture, Clean Architecture, microservices, modular monoliths, monorepos, SOLID, layered architecture, design patterns

Fintech & Payment Systems: Digital payment platforms, transaction workflows, financial integrations, banking correspondents, traceability and critical service support

Databases & Persistence: PostgreSQL, MySQL, MongoDB, DynamoDB, Amazon RDS, Sequelize, Mongoose, data modeling and SQL queries

Cloud & Infrastructure: AWS (EC2, S3, RDS, Lambda, Cognito, DynamoDB, SageMaker), Docker, Docker Compose, NGINX, PM2, DigitalOcean

DevOps, Observability & Security: GitHub Actions, GitLab CI, CI/CD, Snyk, Grafana, Metabase, Postman, dependency and vulnerability management

Testing & Software Quality: Jest, Cypress, Puppeteer, unit testing, integration testing, end-to-end testing and API validation

AI-Assisted Engineering: Kiro, agents, hooks, execs, generative AI and development workflow automation with human validation

PROFESSIONAL EXPERIENCE

Software Engineer | Backend & Fintech

Wompi | Remote · Colombia
April 2024 – November 2026

- Contributed to the evolution and operation of fintech platforms and digital payment solutions, working with services and platform components in business-critical environments.
- Developed and maintained backend services and platform components using Go (Golang), Node.js and TypeScript across microservices, monolithic applications and monorepos.
- Worked on integrations and processes within the transaction ecosystem, banking correspondents and financial partners, supporting service continuity.
- Analyzed incidents and service behavior through log reviews, monitoring, operational queries, technical escalations and collaboration on root cause analysis and postmortems.
- Worked with AWS services including EC2, S3, RDS, Lambda, Cognito and DynamoDB, as well as operational and observability tools such as Grafana, Metabase and Postmark.
- Contributed to software quality and security through Docker, CI/CD, automated testing, and dependency and vulnerability remediation with Snyk.
- Implemented AI-assisted development workflows using Kiro, agents, hooks and automated executions, reviewing and validating their outputs.

Full Stack Developer | Backend & API Development

Amaris Consulting | Medellin, Colombia
April 2022 – October 2023

- Developed backend services and application features using Node.js, TypeScript and Express.js.
- Designed and integrated services through REST APIs, GraphQL, Apollo Server and WebSockets/Subscriptions for application communication.
- Implemented modular solutions and contributed to microfrontend and decoupled service architectures using Webpack and Module Federation.
- Integrated services with PostgreSQL, MySQL and MongoDB databases using ecosystem tools and libraries such as Sequelize and Mongoose.
- Automated tests and validations with Jest, Cypress, Puppeteer and Postman, including unit, integration and end-to-end testing.
- Supported application deployments and operations on AWS and DigitalOcean using S3, Lambda, RDS, Docker, Docker Compose, NGINX and PM2.
- Contributed to continuous integration and delivery workflows through GitHub Actions and GitLab CI.

Full Stack Developer | Technical Coordination

Financial and banking software projects | Cali, Valle del Cauca, Colombia
June 2021 – January 2022

- Contributed to and coordinated technical work on international financial and banking software projects, including initiatives related to institutions in the United Kingdom and Panama.
- Built and integrated backend services with Node.js, TypeScript, Express, GraphQL, Apollo Server, REST, SOAP and WebSockets.
- Implemented data persistence and integrations with MongoDB and MySQL using Mongoose and Sequelize.
- Collaborated on modular solution design, separation of concerns, service integration and reusable component development.
- Coordinated development team activities and contributed to Agile Scrum practices.
- Supported end-to-end testing, API integrations and deployments on AWS and DigitalOcean using Docker, NGINX and PM2.

EDUCATION

Universidad Autónoma del Caribe | Engineering studies – Software and Robotics track

November 2016 – November 2019

LANGUAGES

Spanish: Native · English: Intermediate (technical reading and written communication; developing conversational fluency)

Bogotá, Colombia · Open to remote and hybrid opportunities
