FULL STACK SOFTWARE ENGINEER | FINTECH & CLOUD

Jesús David Juvinao Pérez

React · Next.js · TypeScript · Node.js · NestJS · Go · APIs · AWS · Software Architecture

Pereira, Risaralda, Colombia | +57 301 454 8087 | juvinaojesusd@gmail.com | linkedin.com/in/jesus-david-juvinao-perez-8a9352174 | github.com/Jesus123780 | juvinaodev.netlify.app

PROFESSIONAL SUMMARY

Full Stack Software Engineer experienced in designing, developing and evolving web applications, transactional platforms and digital solutions. I work with frontend technologies such as React, Next.js, JavaScript and TypeScript, as well as backend technologies including Node.js, NestJS, Express.js and Go (Golang), building end-to-end solutions. Experienced in REST and GraphQL API development and integration, microservices, modular architectures, Clean Architecture and Hexagonal Architecture. I have worked with relational and NoSQL databases, cloud services and infrastructure using AWS, Docker and CI/CD tools. My background includes fintech and digital payment projects, where security, availability, traceability and service performance are essential. I also use AI-assisted engineering and automation tools to improve development workflows while maintaining technical review and human validation. I focus on building maintainable, scalable products that solve real business needs, collaborating with Engineering, Product and DevOps teams.

TECHNICAL SKILLS

Frontend & UI Development: React, Next.js, JavaScript (ES6+), TypeScript, HTML5, CSS3, Material UI, shadcn/ui, responsive interfaces, reusable components and frontend architecture

Backend & Programming Languages: Node.js, TypeScript, Go (Golang), NestJS, Express.js, Apollo Server, Ruby on Rails, backend services and business logic

APIs & Service Integration: REST APIs, GraphQL, Apollo, SOAP, WebSockets, Subscriptions, third-party integrations, API contracts and inter-application communication

Architecture & Software Design: Hexagonal Architecture, Clean Architecture, microservices, modular monoliths, monorepos, microfrontends, SOLID, layered architecture and design patterns

Databases & Persistence: PostgreSQL, MySQL, MongoDB, DynamoDB, Amazon RDS, Sequelize, Mongoose, data modeling and SQL queries

Cloud & Infrastructure: AWS (EC2, S3, RDS, Lambda, Cognito, DynamoDB, SageMaker), Docker, Docker Compose, NGINX, PM2, DigitalOcean and application deployments

DevOps, Observability & Security: GitHub Actions, GitLab CI, CI/CD, Snyk, Grafana, Metabase, Postman, monitoring, diagnostics and vulnerability management

Testing & Software Quality: Jest, Cypress, Puppeteer, unit testing, integration testing, end-to-end testing and API validation

Fintech & Payment Systems: Digital payment platforms, transaction workflows, financial integrations, banking correspondents, traceability and critical service operations

AI-Assisted Engineering: Kiro, agents, hooks, execs, generative AI and development workflow automation with human review and validation

PROFESSIONAL EXPERIENCE

Software Engineer | Full Stack & Fintech

Wompi | Remote · Colombia
April 2024 – October 2026

- Contributed to the evolution and operation of fintech platforms and digital payment solutions, working with software components and services in business-critical environments.
- Developed and maintained software features and components, contributing to frontend and backend solutions across microservices, monolithic applications and monorepos.
- Developed and maintained backend services using Go (Golang), Node.js and TypeScript, contributing to integrations and communication between platform components.
- Worked on integrations and processes within the transaction ecosystem, banking correspondents and financial partners, supporting service continuity and availability.
- Analyzed and diagnosed incidents through log reviews, monitoring, operational queries, technical escalations and collaboration on root cause analysis and postmortems.
- Worked with AWS services including EC2, S3, RDS, Lambda, Cognito and DynamoDB, as well as operational and observability tools such as Grafana, Metabase and Postmark.
- Contributed to software quality, security and deployment through Docker, CI/CD, automated testing, and dependency and vulnerability remediation with Snyk.
- Implemented AI-assisted development workflows using Kiro, agents, hooks and automated executions, with technical review and output validation.

Full Stack Developer | Frontend & Backend

Amaris Consulting | Medellin, Colombia
April 2022 – October 2023

- Developed frontend and backend features for web applications using JavaScript, TypeScript and Node.js ecosystem technologies.
- Built and integrated frontend interfaces and components, promoting reusability, modularity and separation of concerns.
- Developed backend services and integrated applications through REST APIs, GraphQL, Apollo Server and WebSockets/Subscriptions.
- Contributed to microfrontend architectures and decoupled services using Webpack and Module Federation.
- Integrated applications with PostgreSQL, MySQL and MongoDB databases using tools such as Sequelize and Mongoose.
- Automated tests and validations with Jest, Cypress, Puppeteer and Postman, including unit, integration and end-to-end testing.
- Supported application deployments and operations on AWS and DigitalOcean using S3, Lambda, RDS, Docker, Docker Compose, NGINX and PM2.
- Contributed to continuous integration and delivery workflows through GitHub Actions and GitLab CI.

Full Stack Developer | Technical Coordination

Financial and banking software projects | Cali, Valle del Cauca, Colombia
June 2021 – January 2022

- Contributed to and coordinated technical work on international financial and banking software projects, including initiatives related to institutions in the United Kingdom and Panama.
- Developed and integrated frontend features and backend services using JavaScript, TypeScript and related ecosystem technologies.
- Built and integrated services using Node.js, Express, GraphQL, Apollo Server, REST, SOAP and WebSockets.
- Implemented data persistence and integrations with MongoDB and MySQL using Mongoose and Sequelize.
- Collaborated on modular solution design, separation of concerns, service integration and reusable component development.
- Coordinated development team activities and contributed to Agile Scrum practices.
- Supported end-to-end testing, API integrations and deployments on AWS and DigitalOcean using Docker, NGINX and PM2.

EDUCATION

Universidad Autónoma del Caribe | Engineering studies – Software and Robotics track

November 2016 – November 2019

LANGUAGES

Spanish: Native · English: Intermediate (technical reading and written communication; developing conversational fluency)

Bogotá, Colombia · Open to remote and hybrid opportunities
